Happy Hour drinks available for your purchase

Macayo's Restaurant, 4001 N. Central Avenue, Phoenix

Have you ever wondered how connective tissue grafts work for your patients? Come find out why periodontists utilize this procedure to improve and enhance the periodontal health of your patients. Dr. Donovan will relate the history of this surgery, discuss techniques employed to determine when it is needed, and describe the expertise required to perform this procedure. Special instances where a connective tissue graft would benefit a patient will also be presented.

Objectives include:

- 1- To understand the history and development of soft tissue grafts
- 2- To understand the indications for the connective tissue graft
- 3- To recognize specific clinical situations that would benefit from connective tissue augmentation

Presented by: Dirk Donovan, DMD, MSD

Dr. Dirk Donovan is Board certified by the American Board of Periodontology and holds a master's degree & Certificate in Periodontics from Indiana University. He attended dental school at Temple University and is presently practicing periodontics in the Phoenix area.
